

Application No. 10/644,135  
Amendment dated 09/01/2005  
Reply to Office Action of June 29, 2005

02-ASD-334 (EM)

**Amendments to the Claims:**

Please amend the claims as indicated below.

**Listing of Claims:**

1. (Currently amended) A electric fluid servo valve assembly comprising:
  - (a) a valve body having a fluid inlet passage, a fluid outlet passage, a pressure ~~signal-sensing~~ port communicating with said outlet passage and an obturator disposed therein and moveable for controlling flow between said inlet passage and outlet passage upon connection of said inlet passage to a source of fluid;
  - (b) an electric actuator disposed with said valve body and operable upon electrical energization for affecting movement of said obturator; and
  - (c) a circuit board with a pressure sensor having a sensing ~~port-aperture~~ disposed thereon, ~~said circuit board including electrical connector terminals for external connection thereto,~~ said board disposed over said ~~body~~ pressure signal sensing port in said valve body with such that said sensing port-aperture in said board communicating communicates with said pressure signal sensing port; and,
  - (d) ~~means for securing said circuit board over said pressure signal port.~~
2. (Currently amended) The valve assembly defined in claim 1, wherein said valve body has a planar surface with said pressure signal sensing port located thereon.
3. (Currently amended) The valve assembly defined in claim 1, wherein said pressure sensor is a transducer and said circuit board includes circuitry for processing a signal output of said transducer.
4. (Original) The valve assembly defined in claim 1, wherein said pressure sensor includes a piezoelectric transducer.

Application No. 10/644,135

02-ASD-334 (EM)

5. (Original) The valve assembly defined in claim 1, wherein said electric actuator includes a solenoid.
6. (Currently amended) The valve assembly defined in claim 1, wherein said sensing ~~port~~ aperture in said pressure sensor is sealed over said pressure ~~signal~~ sensing port in said valve body with an annular seal ring.
7. (Currently Amended) The valve assembly defined in claim 1, wherein said sensing ~~port~~ aperture in said pressure sensor includes an aperture formed through said circuit board.
8. (Original) The valve assembly defined in claim 1, wherein said electric actuator includes a plurality of discrete electrical terminals.
9. (Original) The valve assembly defined in claim 1, further comprising a manifold with a plurality of said valve bodies secured thereon with said inlet and outlet passages of each valve body communicating with corresponding inlet and outlet ports on said manifold.
10. (Currently Amended) A method of making a fluid electric servo valve assembly comprising:
  - (a) providing a valve body having an inlet and outlet and a pressure ~~signal~~ sensing port communicating with the outlet;
  - (b) disposing a movable obturator in said body between said inlet and outlet for controlling flow therebetween;
  - (c) disposing an electric actuator on said body and effecting movement of the obturator upon energization of the actuator;
  - (d) disposing a circuit board with a pressure sensor thereon over said pressure ~~signal~~ sensing port and providing an electrical indication of the sensed pressure at the valve outlet.

02-ASD-334 (EM)

11. (Original) The method defined in claim 10, further comprising disposing the valve body on a manifold block and connecting said inlet and outlet passages to corresponding inlet and outlet ports in said manifold.
12. (Currently amended) The method of defined in claim 10, wherein said step of disposing a circuit board includes disposing thea circuit board with a piezoelectric pressure sensor.
13. (Currently Amended) The method defined in claim 10, wherein said step of disposing an electric actuator includes disposing a solenoid ~~and magnetically moving the~~ to move obturator magnetically.
14. (Currently amended) The method defined in claim 10, wherein said step of disposing a circuit board over said pressure ~~signal sensing port in said valve body~~ includes sealing said board over said port with an annular seal.

Please add the following new claims:

15. (New) A electric fluid servo valve assembly comprising:
  - (a) a valve body having a fluid inlet passage, a fluid outlet passage, a pressure sensing port communicating with said outlet passage and an obturator disposed therein and moveable for controlling flow between said inlet passage and outlet passage upon connection of said inlet passage to a source of fluid;
  - (b) an electric actuator disposed with said valve body and operable upon electrical energization for affecting movement of said obturator; and
  - (c) a pressure sensor having a sensing aperture disposed over said pressure sensing port in said valve body such that said sensing aperture in said board communicates with said pressure sensing port.
16. (New) The valve assembly defined in claim 15, wherein said valve body has a planar surface with said pressure sensing port located thereon.

02-ASD-334 (EM)

17. (New) The valve assembly defined in claim 15, wherein said pressure sensor is a transducer.
18. (New) The valve assembly defined in claim 15, wherein said electric actuator includes a solenoid.
19. (New) The valve assembly defined in claim 15, wherein said sensing aperture in said pressure sensor is sealed over said pressure sensing port in said valve body with an annular seal ring.
20. (New) The valve assembly defined in claim 15, further comprising a manifold with a plurality of said valve bodies secured thereon with said inlet and outlet passages of each valve body communicating with corresponding inlet and outlet ports on said manifold.
